JK Products Ready to Run Slot Cars

3 Easy Steps to making the custom painted ready to run car of your choice!!

1. Choose a chassis and motor.
2. Choose a custom painted body.
3. Combine the body part number and the chassis part number. For example, a 4" Spring Steel with a S-16D motor and a Toyota GT-1 body would be part number 1023 and then attach 31 to the end of it to make the ready to run car's part number of 102331.

The bushing holes in the Cheetah 11 are larger than 3/16" for a reason. You must jig and solder the bushings in place. If you don't have jigs wheels, you can use two brand new gears that are the same size. Also, the recommended front wheel for the Cheetah 11 is JK8724. This chassis was designed by racer for racers.

Let the revolution begin!

Clear Bodies, cont.

To get the part number for the body you want, combine the number of the body with the letter of the thickness you want.

A = .007" B = .010" C = .015" D = .020"

For example, to order a 4" Toyota GT1 in .007" thickness, the part number would be 7176A. Or, to order a 4" Dodge Stockcar in .010" thickness, the part number would be 70524B.
